

TECHNICAL NOTE ON CLIO FW MEASUREMENT SYSTEM

Applies to: CLIO FW-01, CLIO 8.

Re: Running CLIO 8 on a Mac Intel computer.

Audiomatica recently has received many insistent inquires from end users interested to run CLIO 8 with the FW-01 audio interface under a MAC with Intel architecture.

We clearly understand and comprehend these requests.

Please note the following:

- CLIO FW and CLIO 8 design started in 2006 and evolved having as target platform the Windows/Intel PC architecture
- Audiomatica just completed the release of the CLIO 8 software and drivers for operation under Windows Vista becoming one of the first measurement systems with native operation for it
- Until mid 2008 the Apple policy about Windows was not to support it directly; it is now become very aggressive with the release of the latest OS
- As of today the operation of CLIO 8 under a Mac Intel computer is not warranted and not supported by Audiomatica

Audiomatica is nevertheless very interested in achieving such compatibility should it be feasible given the actual hardware and software design and is going to work on this topic in the coming months hoping to give our end users a positive answer.
